AMENDMENTS TO THE CLAIMS

1. (previously presented) A method of speculatively issuing memory requests while maintaining a specified packet order comprising:

receiving a first packet and a second packet for forwarding, wherein said first packet is received prior to said second packet;

sending a first memory request corresponding to said first packet; sending a second memory request corresponding to said second packet prior to receiving a first memory reply corresponding to said first memory request;

forwarding said first packet prior to forwarding said second packet; and receiving a second memory reply prior to forwarding said first packet.

2-3. (cancelled)

- 4. (original) The method as described in Claim 1 wherein said first memory request is to request resource to forward said first packet.
 - 5. (cancelled)
- 6. (previously presented) The method as described in Claim 1 further comprising receiving said first memory reply prior to forwarding said first packet.
- 7. (original) The method as described in Claim 1 wherein said first packet comprises an internet protocol packet.
 - 8. (previously presented) A network method comprising:

 receiving a first packet and a second packet for forwarding;

 sending a first memory request corresponding to said first packet;

 sending a second memory request corresponding to said second packet

 prior to forwarding said first packet; and

receiving a second memory reply prior to forwarding said first packet.

Serial No.: 10/091,775 Examiner: Wong, Warner
- 2 - Art Unit: 2616

9-10. (cancelled)

- 11. (original) The method as described in Claim 8 wherein said first memory request is to request resource to forward said first packet.
 - 12. (cancelled)
- 13. (original) The method as described in Claim 8 wherein said first memory reply is received prior to forwarding said first packet.
- 14. (original) The method as described in Claim 8 wherein said first packet comprises an internet protocol packet.
 - 15. (previously presented) A networking device comprising:a first packet processor comprising:

an input interface having a port to accept incoming packets;

an input memory coupled to said input interface for temporarily storing said packets in a queue arranged by a receiving order;

a second packet processor comprising:

an output interface having a port to send said packets out of said networking device;

an output memory coupled to said output interface for temporarily storing said packets;

a switching fabric coupled to said first packet processor and said second packet processor for conveying information between said first packet processor and said second packet processor; and

said first packet processor also for sending a memory request corresponding to a first packet which is not at a head of said queue to said second packet processor, said first packet processor also for receiving a memory reply from said second packet processor corresponding to said

Serial No.: 10/091,775 Examiner: Wong, Warner

memory request for said first packet prior to forwarding a second packet that is ahead of said first packet in said queue.

16. (cancelled)

- 17. (currently amended) The networking device as described in Claim 15 wherein said first packet processor is also for sending a third packet to said second packet processor, wherein said third packet is at the head of said queue.
- 18. (previously presented) The networking device as described in Claim 17 wherein said second packet processor is also for receiving said first packet, said second packet and said third packet.
- 19. (Previously Presented) The networking device as described in Claim 15 wherein said second packet processor is also for sending said first packet out of said networking device.
- 20. (original) The networking device as described in Claim 15 further comprising a plurality of packet processors in addition to said first and said second packet processors coupled to said switching fabric.
- 21. (Previously Presented) The networking device as described in Claim 15 wherein said memory request comprises a first portion to indicate that said first packet is not at a head of said queue.
- 22. (Previously Presented) The networking device as described in Claim 15 wherein said first packet is an internet protocol packet.
 - 23. (previously presented) A networking device comprising:

 a means for sending a memory request corresponding to a second packet prior to sending a first packet, wherein said first packet is received prior to receiving said second packet; and

Serial No.: 10/091,775 Examiner: Wong, Warner

a means for receiving a memory reply corresponding to said memory request prior to sending said first packet.

24-26. (cancelled)

- (original) The networking device as described in Claim 23 wherein 27. said means for sending a memory request further comprises means to request resource to transfer said packet.
- (original) The networking device as described in Claim 23 wherein 28. said means for sending a memory request further comprises means for accepting a memory reply prior to forwarding said packet.
- (original) The networking device as described in Claim 28 wherein 29. said means for accepting a memory reply further comprises means to assign network resource to transfer said packet.
- (original) The networking device as described in Claim 23 wherein 30. said packet is an internet protocol packet.
- (previously presented) The method as described in Claim 1 wherein 31. said first packet and said second packet are maintained in a transfer order queue.
- (previously presented) The method as described in Claim 31 wherein 32. said second memory request is sent prior to said second packet moving to a head of said transfer order queue.
- 33. (previously presented) The method as described in Claim 8 wherein said first packet and said second packet are maintained in a transfer order queue.

Examiner: Wong, Warner Serial No.: 10/091,775 - 5 -

- (previously presented) The method as described in Claim 33 wherein 34. said second memory quest is sent prior to said second packet moving to a head of said transfer order queue.
- (previously presented) The networking device as described in Claim 23 35. wherein said means for sending a memory request further comprises means for maintaining the transfer order of said first and said second packets.
- (previously presented) The networking device as described in Claim 35 36. wherein said means for maintaining the transfer order of said first and said second packets comprises a transfer order queue.
- (currently amended) The networking device as described in Claim 23 37. wherein said means for sending a memory request further comprise sending said memory request for said second packet prior to said second packet reaching a head of said transfer order queue.
